**ABOUT US**

With a reputation of providing high quality products along with high customer satisfaction, Lanka Plywood is an established leader of plywood doors in Sri Lanka. Commencing the manufacture of plywood doors in year 2000 and catering to a niche market in Kandy, the company at present has a broad clientele across the country.

With Door Plants in Kandy and Galigamuwa and a labor force of nearly 100 employees we are capable of manufacturing more than 1500 quality doors a month.

With its in house timber sawing and chemical treatment plants, Lanka Plywood has a strong quality assurance and has been awarded the ITI certification for the chemical treatment of rubber stiles. Our unique trait has been the ability to provide both to the individual customer and to mass constructions making us the preferred choice of many.

All our doors come with a 7 year warranty.

**PROJECTS COMPLETED**

CUSTOMER	PROJECT	ITEM SUPPLIED	QUANTITY
CECB	AMPARA HOUSING	PLY DOOR- HOLLOW CORE	160
CECB	NANU OYA QUARTERS	PLY DOOR- HOLLOW CORE	78
GREEN VALLEY SHELTERS .	DICKOYA GENERAL HOSPITAL	PLY DOOR- HOLLOW CORE PLY DOOR- SOLID CORE	110

**SPECIFICATION; PLYWOOD DOOR.**

**Frame** : The frame structure of the door is constructed with rubber wood. The rubber wood is chemically impregnated with boric acid and seasoned/dried in a kiln. The wood is dried to reduce the moisture content to less than 10%. The chemical treatment gives the timber resilience against insect and fungi attacks. The said rubber timber is sawn and treated in house thereby enabling the quality of the seasoning. The thickness of the frame is 26mm.

**Door skins** : Only the finest Malaysian manufactured sheets are used as door skins in our production plant. The highly sanded finish and the uniformity of the wood grain gives a rich appearance to the door. The thickness of a door skin is 3.0 mm. (2 nos of door skins are use on either side of the frame)

**Glue** : Urea Formaldehyde resin is used as the glue to bind the rubber frame and the door skins. The resin is imported from Saudi Arabia and also constitutes insect repellent properties.

**Pressing** : The rubber frame and the door skins are coated with glue are inserted into a press and pressed using the cold pressing technique. A pressure of approx. 150 tonnes is exerted on a door to give a lasting and comprehensive bond.

**Finishing** : The pressed doors are trimmed to specification with high rpm saws resulting in a clean cut; subsequently the doors are edge and surface sanded to achieve the desired smooth finish.

The Final product is issued after the stringent examination of the quality inspector.

*The finalized plywood door is guaranteed for seven years against manufacturing defects.*
